

TO30 ALTERNATOR KIT INSTRUCTIONS S.43233

Installation Instructions for **Ferguson TO30 (less Tractormeter)**

- 1- Disconnect and remove battery, wiring, harness, generator, brackets and voltage regulator.
- 2- Install new mounting brackets with bolts furnished. In same location as generator install alternator using spacer and belt (per diagram). Tighten securely.
- 3- Install wiring harness (per diagram). Locate coil resistor near ignition switch. Change all light bulbs to 12 volt.
- 4- Check 12 volt battery for condition and full charge. Clean posts and install. (Negative ground only)
- 5- Start tractor. As engine speed is increased, alternator will start charging. If not, check installation.

- 1. DO NOT ATTEMPT TO POLARIZE THE ALTERNATOR. Alternators do not require polarization and doing so will seriously damage the charging system.
- 2. Never operate the alternator with the charging system open circuited as this will damage the diodes.
- 3. Never "ground" or "short" any terminal on the alternator or voltage regulator.
- 4. Reversing the battery polarity will instantly burn out the alternator diodes.
 - a. Be sure ground cable is connected to the correct battery post.

 - b. Always disconnect both battery cables before connecting a charger to the battery.
 c. When starting your engine with a booster battery, be sure to connect battery posts POSITIVE TO POSITIVE and NEGATIVE TO NEGATIVE.
